ANCIENT WEALTH: SILVER'S EPIC RISE TO MODERN RICHES

Leveraging the Silver Bull to the Max

If you have ever held silver in your hands, that feeling of glory is running through your veins because real money feels powerful.

Silver is by far the most dynamic of the precious metals, and its unique properties give it superiority. Wealth Research Group views silver as the greatest Astute Speculation in the entire resource industry.

Humans have been able to separate silver from lead going back to 3,000 B.C. In Greece, silver was the most commonly used coin in all city-states.

The Romans were actually the first to use gold and silver as their medium of exchange (money) and quickly found out what happens when cheating and mixing base metals in the minting process... the collapse of a sound money system can shatter societies and bring down empires.

The more recent Ottoman Empire was actually based on silver. Coins were minted in silver, with taxes and officials paid using the metal.

Qualities as Money

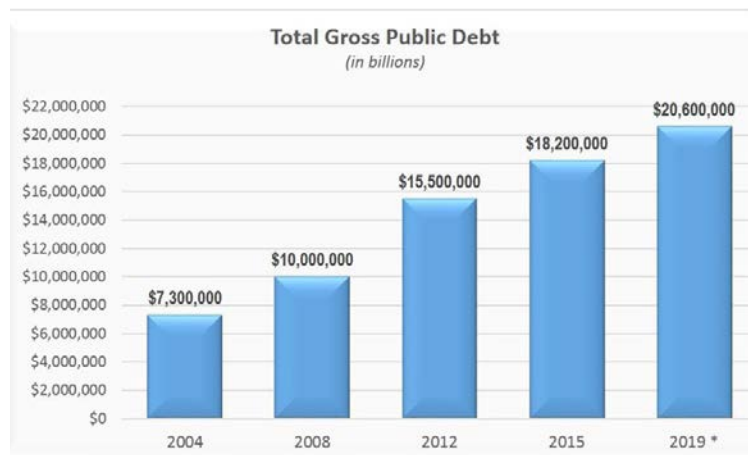

- 1. Malleable:** Its relative softness allows silver, like gold, to be pressed into coins.
- 2. Divisible:** It's easy to divide silver into smaller pieces.
- 3. Consistent:** Silver is the same no matter where it's mined, and that's an important quality, for it assures universality.

ANCIENT WEALTH: SILVER'S EPIC RISE TO MODERN RICHES

4. **Intrinsic Value:** The most obvious flaw with our current fiat monetary system is that our form of money is entirely credit-based. This has caused the greatest debt bubble the world has ever known and is keeping many investors up at night.

That's the idea behind holding physical gold and silver. They are true money, and out of the two, silver clearly has more to gain, as no government treats the metal as money currently, and if they do decide to re-institute its monetary role, the price would be much higher (more than 300% higher than today's).

5. **Rarity:** All the silver ever mined is equal to 1.5 million tonnes and would fit into a 50-meter cube in diameter.
6. **Resiliency:** Silver is durable and corrosion-resistant. That's an extremely important trait – compare that to a \$100 bill that gets wet or torn.

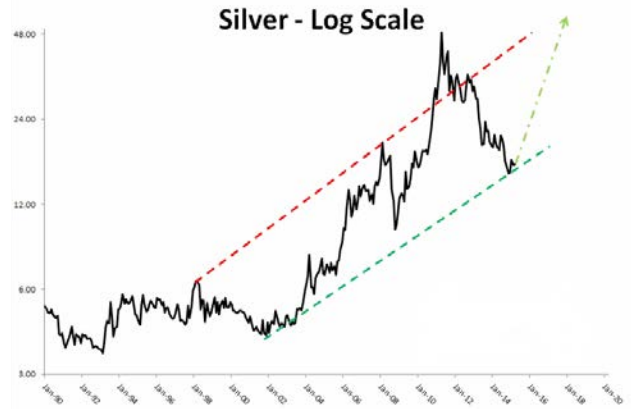

The #1 stock for you to consider in 2017 in light of this blunt manipulation by JP Morgan -- which could send silver into prices never seen before -- is Silver One Resources (TSX-V: SVE & OTC: SLVRF)

With this company, the potential is in the people and the aggressive growth strategy that is far beyond anything peer silver companies have in place. **The difference is in the caliber and abilities of the people.** Exploration companies that are destined for greatness share the following key components that I have found over the years:

ANCIENT WEALTH: SILVER'S EPIC RISE TO MODERN RICHES

1. **Correct Timing:** The time to form new mining companies is at depths of bear markets and the early stages of bull markets, where asset prices are still cheap, access to capital is more flexible, and the top people are making themselves available for new opportunities. Silver One has this part checked: it formed in August 2016, only a few months into what is now becoming a multi-year silver bull market.

The most important financial event of 2016 was exposing the fraud committed by big banks when they manipulated the price, and Deutsche Bank had to admit to fixing both gold and silver prices. Because of this, it's now going to become much harder to fix prices and create sudden leveraged panic paper selling, and with the increased oversight and government agencies watching the screens with a careful eye, this could be the year silver is finally re-priced at at least \$35 per ounce.

2. **Proven Management:** I would, without a doubt, put this at the top of my list of the most critical **go or no-go bottlenecks** for making an investment. In the resource business, there's a methodology to achieving success and increasing shareholder value, and management and leaders make decisions every day that directly affect our money.

- *Silver One Resources (TSX-V: SVE & OTC: SLVRF) has Greg Crowe as president and CEO.*

This is the same person who led Entrée Gold Inc. from early-stage exploration (like SVE is today) to advanced development, joint-venturing with giants like Rio Tinto and Turquoise Hill Resources.

- *Luke Norman, the chairman, is the co-founder of Gold Standard Ventures, a company we profiled in July 2016 that doubled in less than 2 weeks.*

From a geological perspective, I have never personally invested in any exploration company in which the head geologist hasn't made significant discoveries, and I am not about to start now. **You should make sure to never compromise on this matter – the lead geologist has to actually be experienced with the full process of discovering an economic deposit.**

- Now, with Silver One, Raul Diaz has 35 years of experience. He has found several mines in Mexico, where these projects are, and he knows the people well, as he comes from First Mining Finance, who is the largest SVE shareholder.

ANCIENT WEALTH: SILVER'S EPIC RISE TO MODERN RICHES

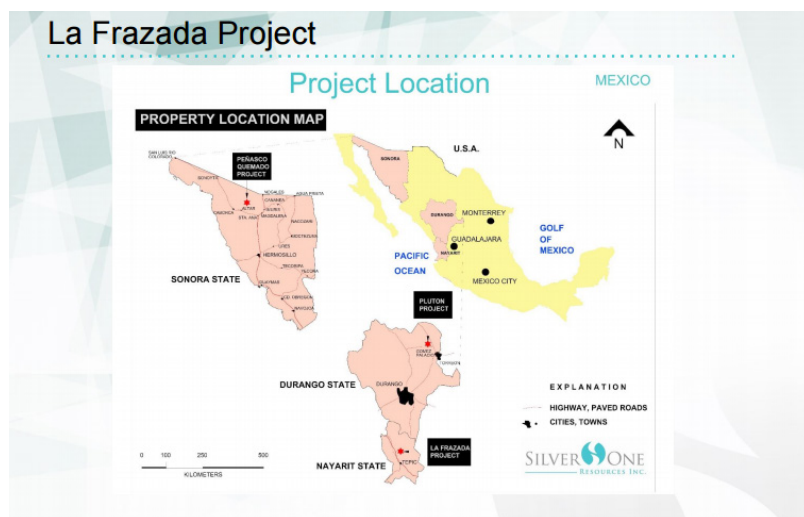

- On top of these, the synergy with First Mining Finance is strengthened even more with the advisory role of Chris Osterman, who is CEO of First Mining Finance (TSX-V: FF).

Let's be perfectly clear here: First Mining Finance is the largest shareholder of Silver One Resources (TSX-V: SVE & OTC: SLVRF), and Keith is one of the largest shareholders of First Mining. Here's what Keith told me, though: "Lior, to give you an idea of just how much skin in the game I have and how confident I am personally that Silver One is exploring a premier world-class deposit and will become a development-stage company, I directly bought shares of SVE in my personal brokerage account."

World-Class Exploration Projects

To understand why we treat this company as the most leveraged stock to play this bull market, you need to study the 3 major projects and the potential they possess.

The best type of property to acquire is the one that comes with a higher degree of certainty, and that is La Frazada.

I've studied the historic results of past exploration programs, as well as, in this particular case, many conversations with the previous company that owned this property, and it is a potential high-reward asset.

ANCIENT WEALTH: SILVER'S EPIC RISE TO MODERN RICHES

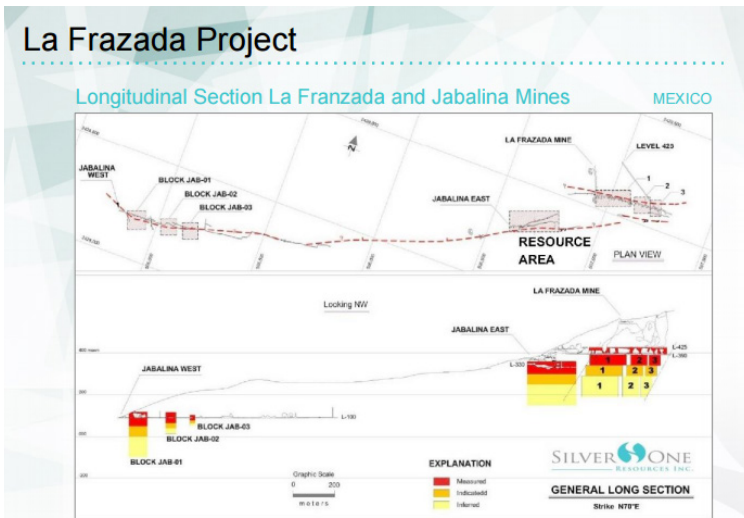

La Frazada Project – Historic Results

Resource Category (Underground)	Mineral Type	Tonnes (Mt)	Ag (g/t)	Au (g/t)	Pb (%)	Zn (%)	Ag (Moz)	Au (oz)	Pb (Mlb)	Zn (Mlb)	Cu (Mlb)
Measured	Sulphides	0.30	260	0.20	0.88	2.38	2.54	1,900	5.86	15.78	0.03
Indicated	Sulphides	0.28	241	0.14	0.86	2.52	2.16	1,300	5.30	15.50	0.55
Total Me+I	Sulphides	0.58	251	0.17	0.87	2.44	4.70	3,200	11.16	31.28	1.18
Inferred	Sulphides	0.53	225	0.17	0.92	2.62	3.86	3,100	10.86	30.77	1.05

** Silvermax Resources Limited reported in a technical report titled "Technical Report and Preliminary Resource Estimate for the La Frazada Silver Property, El Zapalote Mining District, Nayarit, Mexico" dated November 24, 2008 (amended January 19, 2009) (filed on SEDAR on February 18, 2009), prepared by William J. Lewis, the above historical mineral resource estimate. The historical mineral resource estimate used "measured mineral resources", "indicated mineral resources" and "inferred mineral resources", which are categories set out in NI 43-101. Accordingly, Silver One considers these historical estimates reliable as well as relevant as it represents a target for exploration work by Silver One. The data base for the historical resource estimate consisted of 729 samples; 233 belonging to the La Jabalina West vein, 304 to the La Frazada vein and 112 samples corresponding to the La Jabalina East-Tiro Real vein. The mineral resource estimate used a block model method with a cut-off grade of 80 g/t Ag, 0.70% Pb and 1% Zn. The qualified person has not done sufficient work to classify the historical estimate as a current mineral resource therefore Silver One is treating these historical estimates as relevant but not current mineral resources.

There are a number of unique attributes to this flagship project, and the location of it is the main one. That should get you excited.

I have seen the figures from the work that has been done previously on this project, and the potential is lucrative – and that’s an understatement.

This is not an exploration company, per se – it’s an aggressive silver hoarder, with the people in place to create a well-executed acquisition action plan and conduct a perfectly budgeted drilling program on the 3 projects the company owns.

**Immediately consider shares of
Silver One Resources
(TSX-V: SVE & OTC: SVLRF)
as the top optionality play for 2017!**
